

## **Provisioning System**

MOBISION's provisioning system is based on the Mobile TV Subscription Management System (MTV-SMS) to manage subscribers' requests from different interfaces, for instance; USSD, IVR, web, short messages or contact center.

MTV-SMS Main Benefits:

- Manage Dealers, Subscribers, Bouquets, Access Rights, Scratch Cards and Content
- Web access, modular, multi user and multi operator
- Support batch processing and automated reporting
- Application is highly resilient and very secure
- Quickly integrates over HTTP, SMPP and SOAP.

MTV-SMS can also scale to meet other partners' requirements, by integrating directly with their provisioning and billing platforms, and/or linking to MOBISION's centralized MTV-SMS.

This enables service providers to view their allocated subscribers' unique address, their associated requests and commands. They can also create their own access rights, while benefiting from an accurate track record for future auditing.

In addition, MTV-SMS customized reporting tool delivers all the essential information automatically or on an ad-hoc basis that can be leveraged for auditing, marketing, revenue assurance, building business strategies and forecasts.
